CrossLexica is the world's largest compendium of links of all types between Russian words. Purely computer-based dictionaries comparable with CL in structure, size of vocabulary and amount of links between vocabulary items do not exist for any other world's language, even for English.

CL is designed for a wide range of users, including scientists, teachers, engineers, journalists, businessmen, diplomats, servicemen, students, retirees, housewives.

CL's linguistic DB is derived from dozens of dictionaries, hundreds of other paper sources, and many thousands of requests to Web search engines.

CL is designed in two basic versions: an abridged-volume Web version with restricted user interface, accessible from a computer on any platform; a full-volume interactive version, installable on any Windows-operated computer.

CL allows studying Russian language in all spheres of its use with respect to its lexicon, morphology and syntax and allows improving any Russian text (document, article, booklet, book, etc.) while creating it at a computer.

The full-volume interactive version contains much more words and inter-word links and thus allows to create a variety of derivative dictionaries, both purely linguistic (synonyms, paronyms, management patterns, etc.) and topical ones (document processing, cooking, cosmetics, etc.). The full version contains a two-way English-Russian dictionary to enter queries in English and to get translations of Russian words and phrases. CL provides convenient access to the global information world through three important in Russian search engines.
